

Hey People,

Wow, crazy week! I hope everyone is healthy and taking all necessary precautions to stay that way. I'm in agreement with the districts' decision to suspend classes as a good first step toward preventing the spread of Covid-19, and we will all need to be patient as this virus runs its natural course.

Needless to say, we'll have to make some adjustments to our schedule and how we continue our classes. But overall, I would say that because most of you are now quite familiar with the website and the projects you are working on, things should go pretty smoothly for us over the next 3 weeks or so.

To that end, I'm working on putting my lectures up on my website in addition to the information that is already there for all your written work. Because I'm still learning the various aspects of technology like CANVAS and ZOOM, I will probably be posting video lectures and other stuff on my website until I become more familiar with DVC's tech supports. Each time I add something up on my website, I'll send everybody an email blast so you can check it out and keep up with the lectures/discussions.

As far as the research paper goes, I'm thinking we'll hold that off until our return to class, which so far appears to be the week of April the 6th or the 13th. I will still have plenty of time to correct them and get them back to you for a final turn-in. As I find out more information about when we'll be returning, I'll pass it along to everyone. Keep up on the journal writing and I will let you all know soon how we'll be handling those.

I plan on still being at the campus on class days to answer questions, work on technology, and hold down the fort. So keep working hard as you have been all semester.

No worries gang, we'll continue on in style as they say! I'm sure we'll all finish the semester stronger and better as a result of these hardships, so for now just stay physically healthy and mentally sharp. I'm looking forward to seeing everyone as soon as we resume.

Best wishes to all,
Kropf
